

## THE ULTIMATE 2

Conceived and constructed with the sole objective of true-to-life audio reproduction, the MAGICO "Ultimate" is nothing less than an industrial work of art that shatters all previous conceptions of what is possible in contemporary loudspeaker design and performance.

## CONCEPT

The 5-way system is housed in all 6061T-6 aircraft-grade hard-anodized aluminum enclosures with front panels machined from 4"-thick slabs of solid aluminum. It incorporates 4 pairs of the most ambitious compression drivers ever made. An 80 Hz 1:1 midbass horn ensures a true horn-loaded signal down to 100 Hz.

The aluminum skin of the 80 Hz midbass horn is reinforced by 56 machined aluminum ribs for stiffness and resonance control. It is hand-welded by skilled craftsmen and takes 4 month to complete.

Quote:

*"The MAGICO Ultimate loudspeaker is, in my view, an advancement in the state-of-the-art in music reproduction. Its achievement also suggests something deeper about the mechanisms by which the sounds of instruments are corrupted by the recording and playback process. Perhaps the low-power-amplifier/high-sensitivity horn-loaded loudspeaker approach, realized at the highest level with the Ultimates, is the true path toward creating the illusion of live music in our homes." - Robert Harley, The Absolute Sound "Issue # 160"*
